

UTILITY LINE UPGRADES AND PERMITTING

Lempster to Newport, New Hampshire

Client

Public Service Company of New Hampshire

Description

Tighe & Bond completed wetlands reconnaissance along a 10 mile electrical distribution line corridor through three towns for the Lempster Wind Project. The purpose of the project was to upgrade an existing utility line between the proposed wind project in Lempster, New Hampshire and an existing electrical substation in Newport, New Hampshire.

Tighe & Bond prepared Permit by Notification applications and submitted them to the New Hampshire Department of Environmental Services (NHDES) and to the municipalities of Lempster, Goshen and Newport. Tighe & Bond also coordinated with each town and NHDES to determine the extent of any additional permitting needs.
